SUEDER MORAIS

SENIOR SOFTWARE ENGINEER | SYSTEM DESIGN | DISTRIBUTED SYSTEMS | AI INFRASTRUCTURE

Gothenburg, Sweden | Open to relocating | sueder@dreuse.dev | linkedin.com/in/sueder-morais

PROFILE

I design distributed systems and the platforms they run on. Over 15 years in Brazil and Sweden, I have worked across API design, event-driven services and cloud infrastructure, taking services from architecture and implementation through deployment and production operations.

My recent work includes Model Context Protocol (MCP) infrastructure and developer tools for agentic workflows. I focus on secure access to tools and data, observability, and making automated checks part of how code gets reviewed and shipped.

TECHNICAL FOCUS

System design and distributed architecture / API design and evolution, service boundaries, Kafka and observability.

Platform engineering / Kubernetes, AWS, Docker, Helm, Argo CD, CI/CD, OpenTelemetry, Prometheus and Grafana.

AI engineering / MCP gateways and servers, agentic workflows, tool authorization and AI-assisted development.

PROFESSIONAL EXPERIENCE

Recorded Future (a Mastercard company)

Jul 2021 - Present

Senior Software Engineer | Gothenburg, Sweden

- Design and maintain distributed Scala services and customer-facing threat intelligence APIs, including REST with OpenAPI, GraphQL, and TAXII 1.1 and 2.1.
- Help define service boundaries for Kubernetes migrations, reducing direct database coupling while preserving existing API contracts.
- Help build and operate Recorded Future's MCP platform, which serves 100+ tools and handles 25,000+ requests per week.
- Design authentication, authorization and data-access boundaries for API and MCP integrations. Hardened CI by pinning third-party actions and resolving code-scanning findings.
- Own service delivery from code to production using Docker, GitHub Actions, Helm and Argo CD on Kubernetes, including API gateway configuration and Vault policies.
- Build event-driven services with Kafka, migrate Scala services from Akka to Apache Pekko, and instrument them with OpenTelemetry.
- Build internal AI developer tools, including Python MCP servers and a Grafana log integration. Use coding agents with automated tests, review and explicit verification.

WirelessCar

Jan 2021 - Jul 2021

Software Engineer Consultant | Gothenburg, Sweden

- Built Java and Spring backend services for connected-vehicle systems on AWS, including serverless services with Lambda and DynamoDB.
- Deployed containerised services to Amazon ECS and Amazon EKS.

PROFESSIONAL EXPERIENCE / CONTINUED

Zeekr (Geely Group)

Jan 2019 - Dec 2020

Software Engineer Consultant | Gothenburg, Sweden

- Built Java and Spring backend services on AWS and used Apache Kafka for event streaming between services.
- Deployed containerised services to Amazon ECS and Amazon EKS and maintained GitLab CI pipelines.

Logo IT

Jul 2017 - Dec 2018

Software Engineer | Brasília, Brazil

- Built enterprise backend software for vehicle registration, streaming applications and payment integrations using Java, Oracle and Linux.

Tarea Management

Jul 2013 - Jul 2017

Software Developer | Brasília, Brazil

- Developed enterprise integrations and backend applications with Java EE, Oracle SOA Suite and Oracle Fusion Middleware.

Stefanini

Feb 2012 - Jun 2013

Software QA Analyst | Brasília, Brazil

- Worked on software quality assurance, validation and defect investigation for enterprise applications.

RSI Informática

Aug 2010 - Feb 2012

Software QA Developer | Brasília, Brazil

- Built and maintained test and quality assurance tooling for software delivery.

ADDITIONAL CONSULTING PROJECTS

Vobys

Infrastructure and DevOps Engineering | Public-sector systems

- Worked on hybrid infrastructure, identity, delivery and observability with Docker, CAS SSO, LDAP, Oracle, CI/CD, Grafana and Loki.

Omni / Prodesp

Backend Integration and Architecture | eSocial / SST

- Contributed to integration design and security architecture for exchanging eSocial and SST data.
